Subject: A short notes on the 27-29 March DUNE ND workshop
Date: April 3, 2017 at 11:23:41 AM EDT
To: <dune-collab@fnal.gov>

We had a productive DUNE Near Detector workshop at Fermilab early last week, with many lively and constructive discussions. During the meeting, we got the sense that there was an emerging consensus that the concept for the DUNE Near Detector system should include both a LAr-TPC and a high-resolution tracker (tracking detector, calorimeters, etc.), where there are a number of options for the tracker.

Please mark your calendars for the next near detector workshop which will take place on the 9-10 June at Fermilab (immediately after the Users Meeting and 50th Anniversary celebration.)

Best regards,
Mark Thomson, Steve Manley, Ryan Patterson, Mike Kordosky
